Introducing Deloitte

Introducing Deloitte

Powerful global network

As one of the largest professional services network, we will bring all the power of our global network to serve you while continuously investing in our relationship.

Deloitte is one of the world's largest professional services network. What does that mean? It means we can offer you access to an unrivalled pool of technical and industry specialists and support you wherever you go in the world.

Our vision is to be **the Standard of Excellence**: the first choice of the most sought-after clients attracted by the breadth and depth of our world-class service in each market segment.

100,000 people in more than 150 countries globally across 640 offices

US\$32.4bn global revenues in FY13

5,795 people on international assignments

6,000

people in 23 offices across Southeast Asia More than

41,000 staff and partners in Asia Pacific

51,400 people hired globally iin FY13

Global organisation

Deloitte provides audit, tax, consulting, and financial advisory services to public and private clients spanning multiple industries. With a globally connected network of member firms in more than 150 countries, Deloitte brings world-class capabilities and deep local expertise to help clients succeed wherever they operate.

Deloitte's approximately 200,000 professionals are committed to becoming the standard of excellence.

Our member firms serves more than 80 percent of the world's largest companies, as well as large national enterprises, public institutions, locally important clients, and successful, fast-growing global companies. We audit nearly 20 percent of the companies with assets that exceed US\$1 billion.

About Deloitte Southeast Asia

Deloitte Southeast Asia Ltd – a member firm of Deloitte Touche Tohmatsu Limited comprising Deloitte practices operating in Brunei, Cambodia Guam, Indonesia, Lao PDR, Malaysia, Philippines, Singapore, Thailand and Vietnam – was established to deliver measurable value to the particular demands of increasingly intra-regional and fast growing companies and enterprises.

With a team of over **270 partners** and **6,300 professionals** in **24 office locations**, Deloitte Southeast Asia specialists combine their technical expertise and deep industry knowledge to deliver consistent high quality services to companies in the region.

We are one Deloitte for the Southeast Asia marketplace, and clients reap the benefit of the combined pool of expertise and specialist skills – whether it is capital markets resources in Indonesia and Singapore or transfer pricing expertise in Guam – Deloitte can bring the strengthened team to deliver services in a seamless manner across the region.

The formation of the Deloitte Southeast Asia practice has also allowed us to centralise and therefore strengthen our training and learning opportunities for both people and clients alike. In addition, Deloitte size and scale gives the ability to invest more heavily in local markets and to continue to offer innovative services and solutions where and when they are needed.

Deloitte Vietnam

Deloitte Vietnam delivers high quality services in the local market by combining the best local and international talents.

Deloitte Vietnam, founded over 20 years ago as the first audit and advisory firm in Vietnam, is part of the Deloitte South East Asia. Our clients are served by over 700 staffs located in our Hanoi and Ho Chi Minh City offices, integrating the deep understanding of Vietnam regulations and business environment with the full strength of our Deloitte South East Asia member firm with practices in Brunei, Guam, Cambodia, Indonesia, Lao PDR, Malaysia, Philippines, Singapore and Thailand. Through our extensive network, Deloitte Vietnam delivers value-added services in Enterprise Risk Services, Consulting, Financial Advisory, Tax and Audit to the private and public sector across a wide range of industries.

Our client service teams help create powerful business solutions for local and multinational companies and organizations. This integrated approach combines insight and innovation from multiple disciplines with business knowledge and industry expertise to help our clients exceed their expectations.

With the power of Deloitte South East Asia and the global vision of the Deloitte network, Deloitte Vietnam is dedicated to providing superior client services with professional objectivity and working diligently to preserve the trust of our clients and business partners.

Our Main Services

Assurance and Advisory

Audit of the financial statements
Perform audit based on agree upon procedures
Special purpose and limited scope audits,
Reviews of engagements to provide comfort to
lenders and shareholders,

Acquisition examinations and due diligence review, IFRS services

Tax Services

Provide advice in organizing investments and business transactions to minimize the overall tax liabilities.

In-depth knowledge of tax requirements (both Vietnamese and expatriate)

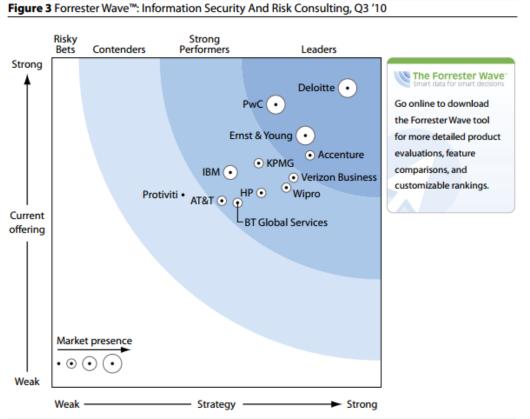

Enterprise Risk Services

The services can be described in five distinct but interrelated areas of business risk management, control and assurance:

- Business Process Improvement
- Internal Audit
- SOX Audit
- · Performance Audit
- Governance
- Contract Risk & Compliance
- Basel II implementation
- Enterprise Risk Management
- Cyber Risk Services
- IT Consulting Services

Financial Advisory Services

Deloitte Financial Advisory team is a highly specialized group that provides strategic and financial advice to clients throughout the region in relation to Corporate Finance, M&A Transaction services, Reorganization and Forensic.

How We Are Different from other firms

Extensive service offerings and continued investment

"Deloitte's vision of becoming the client's trusted partner, coupled with its extensive list of services and technical and business experience, separates it from the rest of the pack. Information security, privacy, and IT risk remain top corporate priorities for Deloitte, and this is evident in the company's recent investments. Deloitte also has an aggressive growth strategy, with plans to invest heavily in emerging areas in this space. It has an excellent customer support structure. Client references pointed to flexibility, project management, and quality of relationships as areas of strength and contract terms and limited services in certain geographies as areas of potential improvement. Deloitte also attracts a more mature client base and excels in solving complex problems while consistently producing high-quality deliverables for its clients. If you have a large and complex environment and are dealing with complex issues that require an understanding of the business process and deep technical capabilities, you should look to Deloitte." -"The Forrester Wave™: Information Security And Risk Consulting Services, Q3 2010," Forrester Research, Inc., August, 2010.

Global TMT Industry

Advisors to some of the world's leading TMT companies

Deloitte member firms serve 94% (or 51 companies) of the 54 FG500 TMT companies

20 of the 23 largest telecommunications companies

100% of the 8 largest global media companies

100% of the 23 largest telecommunications companies

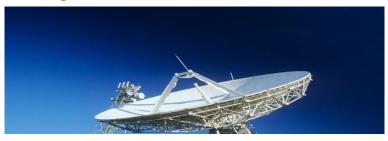

FORTUNE GLOBAL 500

Our Global TMT experiences

Innovation by collaboration

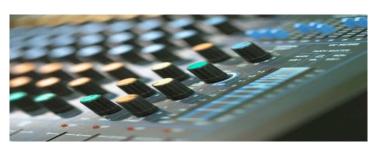

• "Deloitte member firms serve 94% of the TMT companies on the Fortune Global 500®."

 At Deloitte we recognize that industry expertise is critical to gaining and sustaining credibility when serving our clients. Understanding our clients' unique industry challenges allow us to tailor our services to meet their specific requirements.

The Global Technology, Media Telecommunications (TMT) group consists of the practices organised in the various member firms of DTTL and includes more than 15.000 member firm partners. directors and senior managers, supported by thousands of other professionals dedicated to helping their clients evaluate complex issues, develop fresh approaches to problems and implement practical solutions.

 TMT encompasses three industry sectors – technology, media and telecommunications.
 There are dedicated TMT member firm practices in 45 locations along with global virtual centres of excellence for each industry sector.

 By addressing the problems of the perpetually growing and innovative TMT industry, Deloitte continues to pursue key clients throughout the world.

Industry focused

- · Creates a unique product, service, or result

What is Project Management?

Project management is the application of knowledge, skills, tools, and techniques to project activities to meet the project requirements. Project management is accomplished through the appropriate application and integration of the 47 logically grouped project management processes, which are categorized into five Process Groups(1). These five Process Groups are:

- Initiating
- Planning
- Executing
- Monitoring and Controlling
- Closing

(1) Source: the Project Management Body of Knowledge (PMBOK® Guide)

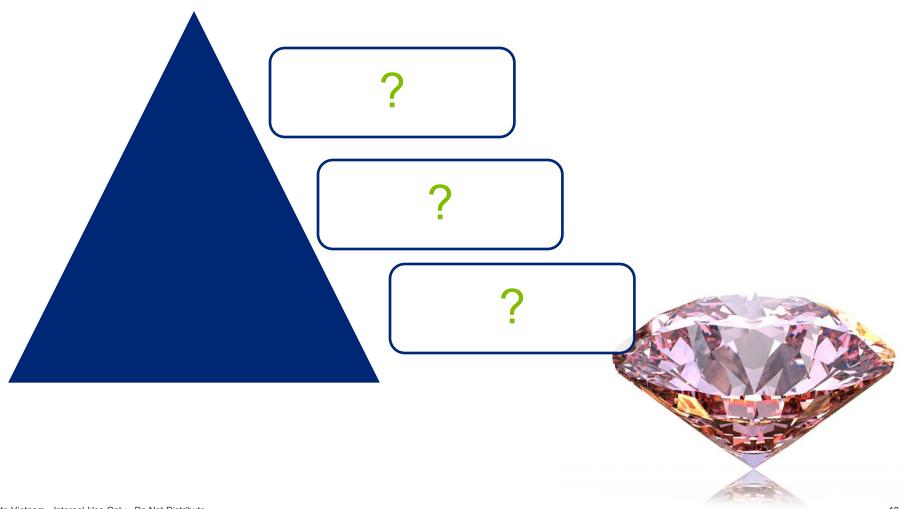

Key aspects in managing a project:

- 1) Requirements;
- 2) Various needs, concerns, and expectations of the stakeholders;
- 3) Communications among stakeholders that are active, effective, and collaborative in nature;
- 4) Managing stakeholders towards meeting project requirements and creating project deliverables;
- 5) Balancing the project constraints (not limited):
 - Scope
 - Quality
 - Schedule
 - Budget
 - Resources
 - Risks

Relationships Among: Program Management, Project Management, Portfolio Management

Competencies for Project Management

Business Values

Two main types of business values:

- > Tangible
- Intangible

Role of Project Manager

- ➤ The role of Project Manager is to lead the team that is responsible for achieving the project objectives while balancing the project constraints.
- Project Manager is the link between the strategy and the team.

Competencies Required:

© 2014 Deloitte Vietnam - Internal Use Only - Do Not Distribute

- Knowledge (about project management and domain);
- > Performance (able to do or accomplish while applying knowledge);
- > Personal (attitudes, core personality characteristics, and leadership)

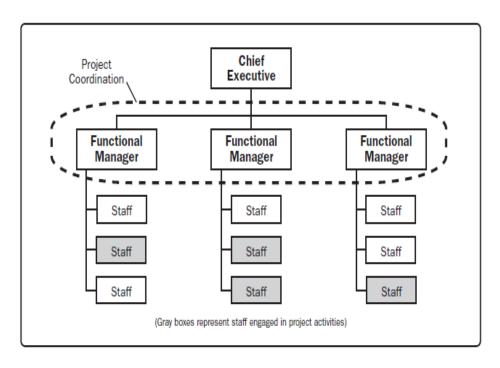

Project Management Vis-à-vis Organizational Structure

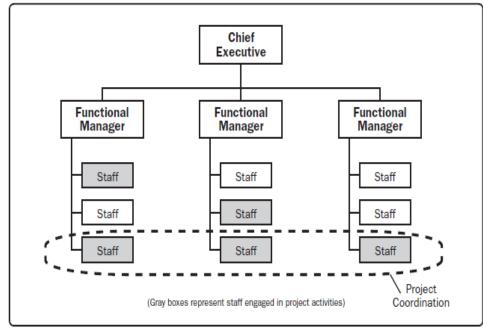

- 1) Functional Organization
- 2) Weak Matrix Organization
- 3) Balanced Matrix Organization
- 4) Strong Matrix Organization
- 5) Projectized Organization
- 6) Composite Organization

Environmental factors

Environmental factors include, but are not limited to:

- Organizational culture, structure, and governance;
- Geographic distribution of facilities and resources;
- Government or industry standards (e.g., regulatory agency regulations, codes of conduct, product
- standards, quality standards, and workmanship standards);
- Infrastructure (e.g., existing facilities and capital equipment);
- Existing human resources (e.g., skills, disciplines, and knowledge, such as design, development, legal, contracting, and purchasing);
- Personnel administration (e.g., staffing and retention guidelines, employee performance reviews and training records, reward and overtime policy, and time tracking);
- Company work authorization systems;
- Marketplace conditions;
- Stakeholder risk tolerances;
- Political climate;
- Organization's established communications channels;
- Commercial databases (e.g., standardized cost estimating data, industry risk study information, and risk databases); and
- Project management information system (e.g., an automated tool, such as a scheduling software tool, a configuration management system, an information collection and distribution system, or web interfaces to other online automated systems).

1. Project Integration Management Overview

4.1 Develop Project Charter

- .1 Inputs
 - .1 Project statement of work
 - .2 Business case
 - .3 Agreements
 - .4 Enterprise environmental factors
 - .5 Organizational process assets
- .2 Tools & Techniques
 - .1 Expert judgment
 - .2 Facilitation techniques
- .3 Outputs
 - .1 Project charter

4.4 Monitor and Control Project Work

- .1 Inputs
 - .1 Project management plan
 - .2 Schedule forecasts
 - .3 Cost forecasts
 - .4 Validated changes
 - .5 Work performance information
 - .6 Enterprise environmental factors
 - .7 Organizational process assets
- .2 Tools & Techniques
 - .1 Expert judgment
 - .2 Analytical techniques
 - .3 Project management information system
 - .4 Meetings
- .3 Outputs
 - .1 Change requests
 - .2 Work performance reports
 - .3 Project management plan updates
 - .4 Project documents updates

4.2 Develop Project Management Plan

- .1 Inputs
 - .1 Project charter
 - .2 Outputs from other processes
 - .3 Enterprise environmental factors
 - .4 Organizational process assets
- .2 Tools & Techniques
 - .1 Expert judgment
 - .2 Facilitation techniques
- .3 Outputs
 - .1 Project management plan

4.5 Perform Integrated Change Control

- .1 Inputs
 - .1 Project management plan
 - .2 Work performance reports
 - .3 Change requests
 - 4 Enterprise environmental factors
 - .5 Organizational process assets
- .2 Tools & Techniques
 - .1 Expert judgment
 - .2 Meetings
 - .3 Change control tools
- .3 Outputs
 - .1 Approved change requests
 - .2 Change log
 - .3 Project management plan updates
 - .4 Project documents updates

4.3 Direct and Manage Project Work

- .1 Inputs
 - .1 Project management plan
 - .2 Approved change requests
 - .3 Enterprise environmental factors
 - .4 Organizational process assets
- .2 Tools & Techniques
 - .1 Expert judgment
 - .2 Project management information system
 - .3 Meetings
- .3 Outputs
 - .1 Deliverables
 - .2 Work performance data
 - .3 Change requests
 - 4 Project management plan updates
 - .5 Project documents updates

4.6 Close Project or Phase

- .1 Inputs
 - .1 Project management plan
 - .2 Accepted deliverables
 - .3 Organizational process assets
- .2 Tools & Techniques
 - .1 Expert judgment
 - .2 Analytical techniques
 - .3 Meetings
- .3 Outputs
 - Final product, service, or result transition
 - .2 Organizational process assets updates

2. Project Scope Management Overview

Flan Scope Management

- .1 Inputs
 - .1 Project management plan
 - .2 Project charter
 - .3 Enterprise environmental factors
 - .4 Organizational process assets
- .2 Tools & Techniques
 - .1 Expert judgment
 - .2 Meetings
- .3 Outputs
 - .1 Scope management plan
 - .2 Requirements management plan

5.4 Create WBS

- .1 Inputs
 - .1 Scope management plan
 - .2 Project scope statement
 - .3 Requirements documentation
 - .4 Enterprise environmental factors
 - .5 Organizational process assets
- .2 Tools & Techniques
 - .1 Decomposition
 - .2 Expert judgment
- .3 Outputs
 - .1 Scope baseline
 - .2 Project documents updates

5.2 Collect Requirements

- .1 Inputs
 - .1 Scope management plan
 - .2 Requirements management plan
 - .3 Stakeholdermanagement plan
 - .4 Project charter
 - .5 Stakeholder register
- .2 Tools & Techniques
 - 1 Interviews
 - .2 Focus groups
 - .3 Facilitated workshops
 - .4 Group creativity techniques
 - .5 Group decision-making techniques
 - .6 Questionnaires and surveys
 - .7 Observations
 - .8 Prototypes
 - .9 Benchmarking
 - .10 Context diagrams
 - .11 Document analysis
- .3 Outputs
 - .1 Requirements documentation
 - .2 Requirements traceability matrix

5.5 Validate Scope

- .1 Input:
 - .1 Project management plan
 - .2 Requirements documentation
 - .3 Requirements traceability matrix
 - .4 Verified deliverables
 - .5 Work performance data
- .2 Tools & Techniques
 - .1 Inspection
 - .2 Group decision-making techniques
- .3 Outputs
 - .1 Accepted deliverables
 - .2 Change requests
 - .3 Work performance information
 - .4 Project documents updates

5.3 Define Scope

- .1 Inputs
 - .1 Scope management plan
 - .2 Project charter
 - .3 Requirements documentation
 - .4 Organizational process assets
- .2 Tools & Techniques
 - .1 Expert judgment
 - .2 Product analysis
 - .3 Alternatives generation
 - .4 Facilitated workshops
- .3 Outputs
 - .1 Project scope statement
 - .2 Project documents updates

5.6 Control Scope

- .1 Inputs
 - .1 Project management plan
 - .2 Requirements documentation
 - .3 Requirements traceability matrix
 - .4 Work performance data
 - .5 Organizational process assets
- .2 Tools & Techniques
 - .1 Variance analysis
- .3 Outputs
 - .1 Work performance information

Project Management

Skills of a successful project manager

- Leadership
- Team building
- Motivation
- Presentation
- Communication
- Listening
- Influencing
- Decision making
- Political and cultural away
- Negotiation
- Resource allocation
- Time management
- Trust building
- Conflict management
- Strategic thinking
- Training and coaching...

Project Management

Out of Control

- People get sick
- Family emergencies come up
- Long-planned vacations arise
- Calls from other departments come in for "your" resources
- Personnel get promoted and move on to other responsibilities
- Team members move on to other positions
- Vendors fail to meet their commitments
- A corporate downsizing is announced
- Severe weather events occur
- Changes in the organizational/management/economic/ laws/ government regulations landscape suddenly take place

Project Management

Tools to support

- PMBOK GUIDE A Guide to the Project Management Body of Knowledge
- Project Management Software, such as Microsoft Project/Office
- Input/Output/Template/Form/Plan/Schedule/Checklist/Matrix/Report
- Meeting facilities/ tools

Agile Scrum Overview

Why Agile Scum?

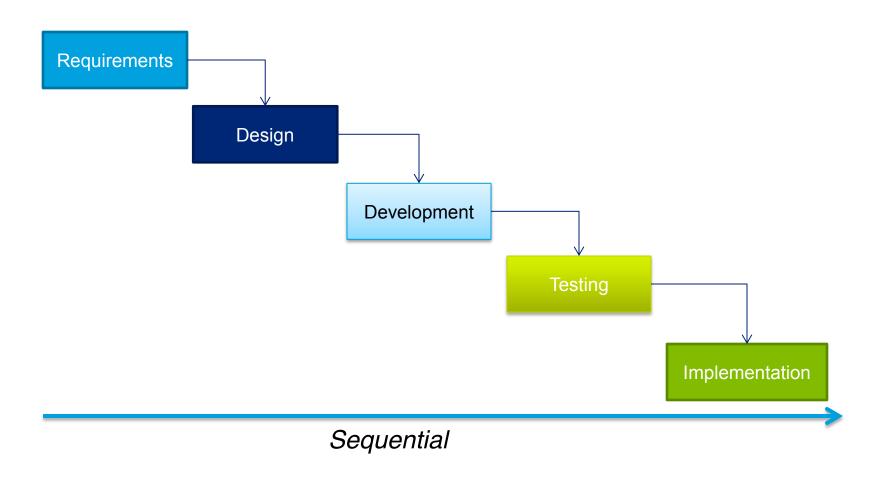

"It is not the strongest of the species that survives, nor the most intelligent that survives. It is the one that is most adaptable to change."

- Charles Darwin

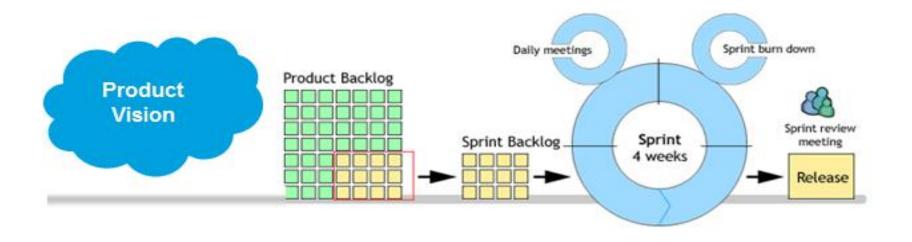

Agile Scum Overview

Traditional Software Development Approach

Agile Scrum Overview

Scrum Process

Agile Scrum Overview

Definition of Scrum

Scrum is a framework within which people can address complex adaptive problems, while productively and creatively delivering products of the highest possible value.

Scrum is:

- Lightweight;
- Simple to understand;
- Difficult to master.

The team model in Scrum is designed to optimize:

- Flexibility;
- Creativity;
- Productivity.

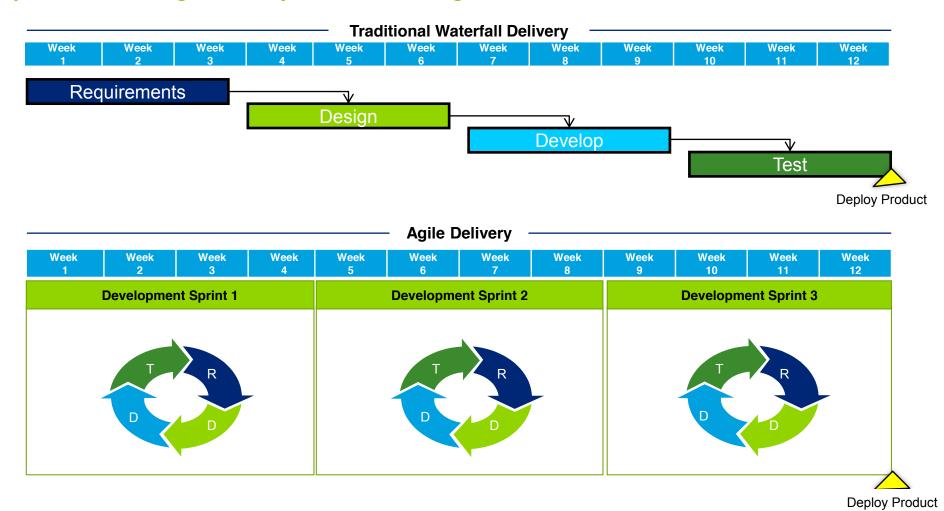

The Scrum Team consists of:

- A Product Owner;
- A Scrum Master;
- The Development Team a Scrum Master.

Waterfall & Agile Methods Comparison

Waterfall and Agile projects take fundamentally different approaches in completing requirements, design, development and testing activities

Detailed Comparison of Methodologies

Agile methodologies differ significantly from a traditional Waterfall software development lifecycle. Agile is focused on flexibility and speed, while Waterfall prefers planning and predictability

	Agile	Waterfall
Overview	 Is iterative Prioritizes individuals & interactions Favors adaptability Produces working software in increments over 2-week "sprints" 	 Is linear & sequential Prioritizes processes & tools Favors predictability Spans months from planning to final product
Requirements	 Defines high-level requirements or "Epics" in product & release plans Defines and refine "User Stories" at sprint planning for each Sprint 	Defines comprehensive list of requirements at outset of development lifecycle
Documentation	 Prefers working software Creates and iterate living, breathing user stories 	 Prefers comprehensive documentation Creates static requirements documenatation at beginning of project

Agile Scum Overview

Agile Manifesto

Individuals and interactions over processes and tools

(emphasis on the relationship of software developers)

Working software over comprehensive documentation

(continuously provide working software which is tested)

Customer collaboration over contract negotiation

(focus on maintaining relationship is high preferred than strict contract)

Responding to change over following a plan

(team authorized to adjust customer needs during iterations)

Source: www.agilemanifesto.com

Agile Scum Overview 12 Principles of Agile

- 1. Our highest priority is to satisfy the customer through early and continuous delivery of valuable software.
- 2. Welcome changing requirements, even late in development. Agile processes harness change for the customer's competitive advantage.
- 3. Deliver working software frequently, from a couple of weeks to a couple of months, with a preference to the shorter timescale.
- 4. Business people and developers must work together daily throughout the project.

- 5. Build projects around motivated individuals. Give them the environment and support they need, and trust them to get the job done.
- 6. The most efficient and effective method of conveying information to and within a development team is faceto-face conversation.
- 7. Working software is the primary measure of progress.
- 8. Agile processes promote sustainable development. The sponsors, developers, and users should be able to maintain a constant pace indefinitely.

- 9. Continuous attention to technical excellence and good design enhances agility.
- 10. Simplicity--the art of maximizing the amount of work not done--is essential.
- 11. The best architectures, requirements, and designs emerge from self-organizing teams.
- 12. At regular intervals, the team reflects on how to become more effective, then tunes and adjusts its behavior accordingly

Agile Scum Overview

Scum Roles

- 1. Product Owner (knowledgeable, empowered to make decision, immediately available)
 - 1 person
 - · Know what should be produced
 - · Responsible for maximizing values and ROI of the product and the
 - · Create and maintenance the Product Backlog
- 2. Scrum Master (responsible, humble, collaborative, committed, influential, knowledgeable)
 - 1 person to server the team (not a team manager)
 - Does whatever it takes to make the Scrum Team successful
 - Remove any Team's constraints and impediments
 - Remove the barriers between the team and the customers
 - Protect the team from disruption or disturbance
 - Coach everyone to be successful with Scrum

3. Development Team

The Team develop the product envisioned by the Product Owner and the customer is going to use.

Attributes of Development Team:

- Self organizing;
- No role, no title for each team member;
- 5-9 members in a scrum team:
- · Motivated to deliver product and to improve skills;
- · Authorized to do what is needed to meet commitment;
- Support and help each other;
- Think out-of-the-box:
- · Flexibility, creativity, and productivity.

Agile Scrum Methodology

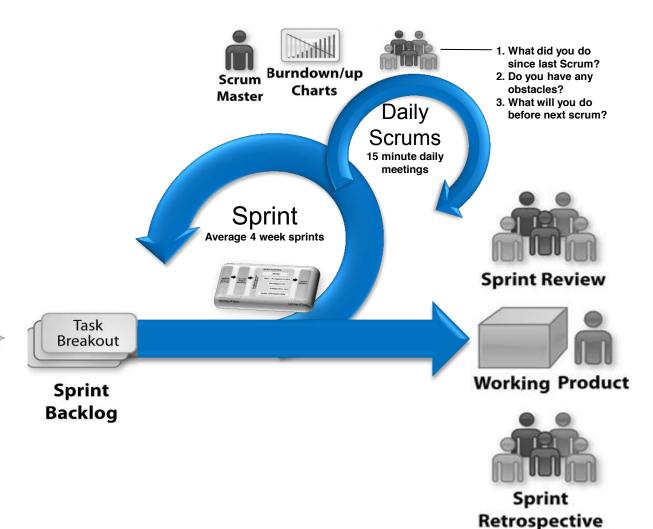

Inputs from Executives, Team, Stakeholders, Customers, Users

Team selects starting at top as much as it can commit to deliver by end of Sprint

Sprint Planning Meeting

Scrum Events

Scrum prescribes 4 formal events for inspection and adaptation:

- **1. Sprint Planning:** The work to be performed in the Sprint is planned at the Sprint Planning. This plan is created by the collaborative work of the entire Scrum Team. Sprint Planning is time-boxed to a maximum of eight hours for a one-month Sprint.
- **2. Daily Scrum**: is a 15-minute time-boxed event for the Development Team to synchronize activities and create a plan for the next 24 hours.
- **3. Sprint Review:** is held at the end of the Sprint to inspect the Increment and adapt the Product Backlog if needed. This is a four-hour time-boxed meeting for one-month Sprints.
- **4. Sprint Retrospective**: is an opportunity for the Scrum Team to inspect itself and create a plan for improvements to be enacted during the next Sprint.

Scrum Events:

- All events are time-boxed events:
- Have a maximum duration:
- Once a Sprint begins, its duration is fixed and cannot be shortened or lengthened.

The Sprint

The heart of Scrum is a Sprint, a time-box of one month or less during which a "Done", useable, and potentially releasable product Increment is created.

Sprints best have consistent durations throughout a development effort. A new Sprint starts immediately after the conclusion of the previous Sprint.

Sprints contain and consist of

- Sprint Planning;
- · Daily Scrums;
- · Development work;
- Sprint Review;
- · Sprint Retrospective.

During the Sprint:

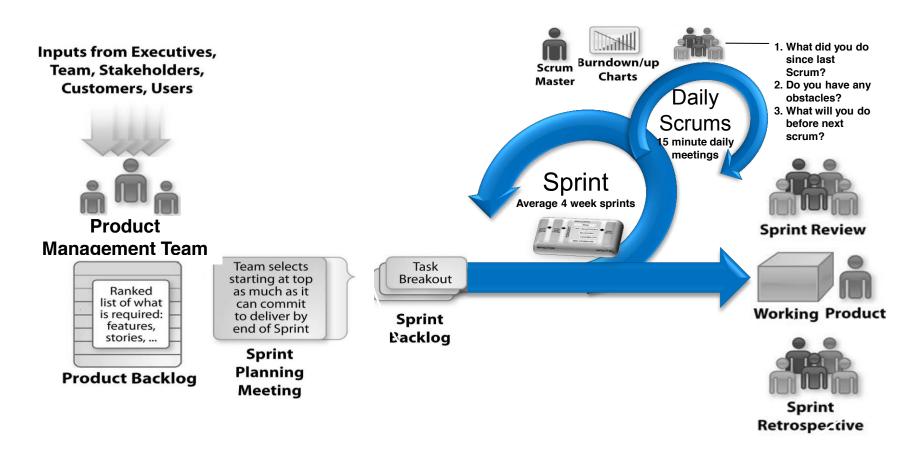

- No changes are made that would endanger the Sprint Goal;
- · Quality goals do not decrease; and,
- Scope may be clarified and re-negotiated between the Product Owner and Development Team as more is learned.

The Sprint (cont.)

The Sprint is the period of time in which the Scrum Team takes the User Stories committed to the Sprint Backlog and develops them into the actual product component.

What is a Product Backlog?

It is our entire collection of Capabilities and User Stories that are stored.

The Product Management Team is constantly adding new User Stories, refining existing User Stories, and prioritizing/re-prioritizing User Stories within the Product Backlog.

	Product Backlog	Sprint Backlog		
Level of detail	Less detailed	Very detailed		
Estimation units	Story Points	Hours		
Ownership	Product Owner	Team		
Revised	Weekly	Daily		
Life span	Project	Sprint		
Table: Key Attributes of the Product and Sprint Backlog				

The product backlog and the sprint backlog serve similar but distinct purposes. The product backlog contains a list of features expressed as user stories that a system should have, meaning all the work that a team completes to create the finished product. The product owner ranks the user stories in the product backlog and provides sufficient detail so that the team can estimate and implement each user story.

In contrast, the sprint backlog is a subset of the product backlog and contains a detailed list of all the tasks that the team must complete to finish the user stories for the iteration or sprint.

Product Backlog

•The Product Backlog is the master list of all functionality desired in the product

- Usually created from user stories, which
- Can deliver value by itself
- Details can be worked out by conversation
- The value of doing this is clear
- · Team understands it well enough to estimate
- Fits in one Sprint
- · We can define clear test criteria
- Ideally expressed such that each item has value to the users or customers of the product
- Prioritized by the Product Owner at the start of each scrum/release planning
- · Reprioritized at the start of each sprint
- · Efforts estimate is relative, not absolute

Sample Product Backlog					
User Story	Priority	Point			
As new user, I can create an account	Must	8			
As an existing user, I can log in to make a purchase	Must	5			
As a user, I can reset my password	Should	2			
As an administrator, I can view account records	Should	5			
As a purchaser, I can choose from a list of products in a specific category in order to see all competing brands	Could	2			
As a purchaser, I can pay using a credit card	Could	2			
As a purchaser, I can setup a line of credit in order to make future purchases easily	Must	13			

Sprint Backlog

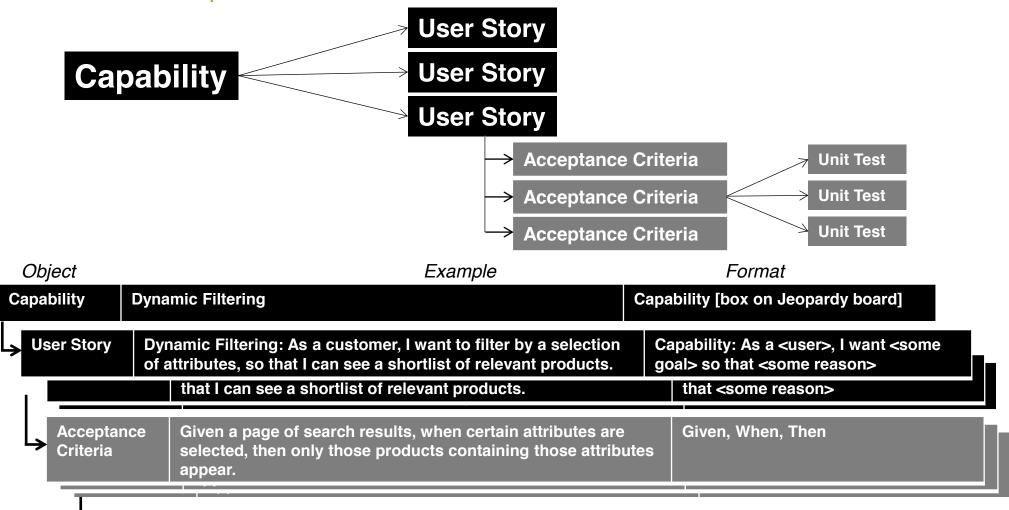

- Sprint backlog is list of tasks/action items to implement solution
- Efforts to complete task should be estimated in hours

User Story	Task	M	Т	W	Т	F	M	Т	W	Т	F
Create account	Create home page with "create account" link	8	2								
Create account	Create DB script	3	0								
Create account	Create sign off form	4	0								
Create account	Create user class with "create" method to populate user table	4	0								
Login	Design and create customer login page	8	4								
Login	Create test cases and test login functionality	3	2								
Admin	Design and create admin login page	4	2								
Admin	Create test cases and test admin login functionality	4	4								
	Total hours of work remaining	34	14								

Capabilities & User Stories

Unit Test

Capabilities are comprised of multiple User Stories. Each User Story will have several associated Acceptance Criteria.

User Story

Object Example

User Story

Dynamic Filtering: As a customer, I want to filter by a selection of attributes, so that I can see a shortlist of relevant products.

Capability: As a <user>, I want <some goal> so that <some reason>

When writing user stories, always begin each user story with the name of its parent Capability

Acceptance Criteria

Well-written Acceptance Criteria should be logical and written from the shoes of the Tech Team. Attach any associated graphics, mocks, process flows to the Acceptance Criteria if it is necessary or beneficial for the Tech Team.

Object	Example	Format
Acceptance Criteria	076: Given a page of search results, when 2 or more attributes are selected, then only those products containing those attributes appear on my page.	ID#: Given, When, Then

Always begin each acceptance criteria with the ID# of the associated User Story.

Definition of Done

Iteration	Product Management	<u>U</u> X/Creative	<u>T</u> echnical
Iteration <u>1</u>	Basic flow completed Technology investigated	sic flow done	Requires U2 Initial draft completed
Iteration 2	Requires U2Flow finalizedWireframes implemented	Flow finalizedBasic screen layout done	Design Approved
Iteration 3	Requires U3 & C3Designs implementedAnimations finalized	Screens finalized. Fine detail	Design Implementation Reviewed

Sprint Retrospective

The entire Scrum team meets at the conclusion of each Sprint for a Sprint Retrospective.

The purpose of the Retrospective is to discuss lessons learned and to reflect on what could be done better for future sprints.

- What should we start doing?
- What should we stop doing?
- What should we continue doing?

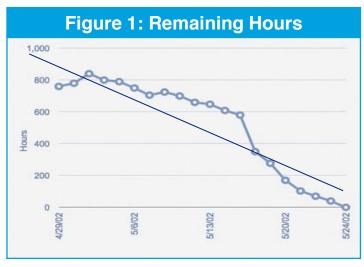

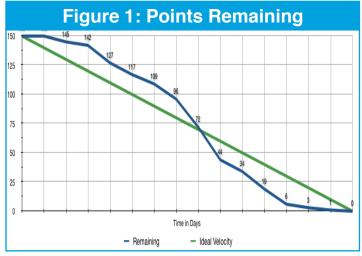

Burn Down Chart

•The Burndown Chart is a graphical presentation of estimated work remaining in the sprint

- Calculated and updated daily to reflect up to date work remaining by release and iteration
- Shows work remaining in Y axis and time in axis
- Typically work remaining goes up and down and eventually trends downwards
- Shows daily overall sprint progress. But does not directly depicts how many user stories/requirements are developed/tested
- Can be used at 2 levels: Release and Sprint
- Can be used by remaining hours (figure 1) or remaining user story points (figure 2)

Burn Down Chart

Burn Down Charts are used to present the "work done" and scrum information.

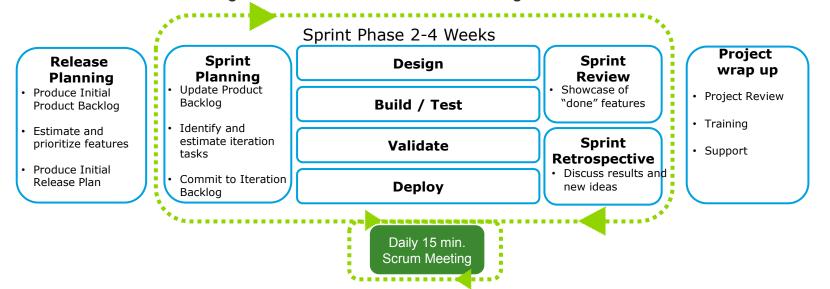

There are 3 types of Burn Down Chart:

- 1. Sprint Burn Down Chart is used for progress of the Sprint
- 2. Release Burn Down Chart is used for progress of release
- 3. Product Burn Down Char is used for progress o the Product

Scrum Software Delivery Overview

•Agile software delivery is collection of development principles based on iterative and sustainable development practices, where requirements and solutions evolve through collaboration in order to deliver the highest value in the shortest time

Artifacts

Product Backlog

A list of all desired work / features for a release that has been ordered by the Product Owner

Sprint Backlog

A list of all desired work / features for an iteration that has been ordered by the Product Owner and committed for completion by delivery team

Burn-up / Burn-down chart

Graphical presentation of estimated work remaining in iteration in relation to time remaining

Product Owner

The product owner prioritizes features and decides what will be built and in which order

ScrumMaster

The ScrumMaster ensures that the team adheres to its chosen process and removes blocking issues.

Roles

Delivery Team

Cross functional and self organizing team that commits and delivers software features

Deloitte.

Deloitte refers to one or more of Deloitte Touche Tohmatsu Limited, a UK private company limited by guarantee, and its network of member firms, each of which is a legally separate and independent entity. Please see www.deloitte.com/about for a detailed description of the legal structure of Deloitte Touche Tohmatsu Limited and its member firms.

Deloitte provides audit, tax, consulting, and financial advisory services to public and private clients spanning multiple industries. With a globally connected network of member firms in more than 150 countries, Deloitte brings world-class capabilities and high-quality service to clients, delivering the insights they need to address their most complex business challenges. Deloitte's approximately 200,000 professionals are committed to becoming the standard of excellence.

About Deloitte Southeast Asia

Deloitte Southeast Asia Ltd – a member firm of Deloitte Touche Tohmatsu Limited comprising Deloitte practices operating in Brunei, Cambodia, Guam, Indonesia, Lao PDR, Malaysia, Philippines, Singapore, Thailand and Vietnam – was established to deliver measurable value to the particular demands of increasingly intra-regional and fast growing companies and enterprises.

Comprising over 270 partners and 6,300 professionals in 24 office locations, the subsidiaries and affiliates of Deloitte Southeast Asia Ltd combine their technical expertise and deep industry knowledge to deliver consistent high quality services to companies in the region.

All services are provided through the individual country practices, their subsidiaries and affiliates which are separate and independent legal entities.

About Deloitte Vietnam

Deloitte Vietnam, founded over 20 years ago as the first audit and advisory firm in Vietnam, is part of the global Deloitte network, one of the largest professional services organisations in the world. Our clients are served by over 700 staff located in our Hanoi and Ho Chi Minh City offices but also enjoy access to the full strength of our Deloitte Southeast Asia member firm with practices in Brunei, Guam, Indonesia, Malaysia, Philippines, Singapore and Thailand. Through our extensive network, Deloitte Vietnam delivers value-added services in Enterprise Risk Services, Consulting, Financial Advisory, Tax, Audit and Professional Training Services to the private and public sectors across a wide range of industries.
